AI TOOLS

- Claude — Chat, CLI & Claude Code

Planning, pipeline design, and skill creation across all phases of development and testing
- Gemini — CLI & API

Developing and testing processes via CLI; building LLM integrations via API
- Codex — Chat & CLI

Planning and developing software through the testing process
- Clustering AI Approach

Cross-referencing multiple AI models to converge on a solid, validated result
- Research — Perplexity & NotebookLM

Deep research and source verification

PROFESSIONAL SUMMARY

Quality Assurance Engineer with over 7 years of experience contributing to the Fintech and Web3 sectors. Dedicated to ensuring the reliability of cryptocurrency transactions, digital asset distributions, and trading bot logic. I enjoy the challenge of managing quality across multiple projects and value close collaboration with cross-functional engineering teams to achieve stable, high-quality releases. Currently exploring how AI-driven workflows and Agentic QA can support and improve manual testing processes.

FEATURED WORK

Clotilde — AI Corporate Travel Assistant

SIDE PROJECT

view ->

A natural-language corporate travel assistant that searches live flights, enforces role-based company policy, routes out-of-policy bookings through a real approval workflow, and keeps travelers notified across every step of their trip.

AEON — Multi-Agent AI System

SIDE PROJECT

view ->

7 AI agents orchestrated by Hermes for crypto signal forecasting. Persistent Obsidian vault memory, real-time market context via Tavily API, and a dedicated QA Auditor agent with Root Cause Analysis. 59 tests across signal generation, audit logic, and memory consistency.

WORK EXPERIENCE

Quality Assurance Engineer & Operations Support

Yellow Capital · Chiang Mai, Thailand

Jan 2023 — Mar 2026

– Key Project: TradePoint (Token Distribution Platform) — Feature Testing: Supported the platform by ensuring token airdrops, unlocks, and treasury sales functioned according to business requirements.

– Balance & Payout Verification: Utilised PostgreSQL and spreadsheets to verify that token amounts and vesting dates in the database correctly matched the front-end display.

– Security & Access: Tested onboarding flows, including MetaMask wallet connections and 2FA, to help maintain secure access to financial modules.

– KYC Verification: Assisted in verifying that the system handled user identity documents (KYC/KYB) correctly and maintained accurate transaction logs.

– API & Service Testing: Conducted API verification by executing Node.js scripts with custom parameters to validate service responses.

– Bot Verification: Checked the logic of Market Making bots to ensure real-time trade execution aligned with intended strategies.

– Monitored system performance and coordinated incident responses to maintain operational stability, enhancing service reliability and minimising user disruptions.

**Quality Assurance Engineer**  
**Openware, Inc.**

Mar 2021 — Dec 2022

- **Exchange Core Logic:** Verified the integrity of the OpenDAX cryptocurrency exchange stack, focusing on order matching engines (Limit/Market orders) and real-time order book updates.
- **Asset Management:** Tested end-to-end deposit and withdrawal workflows across multiple chains, ensuring wallet balance accuracy and transaction status synchronisation.
- **SaaS Infrastructure:** Managed testing for the Admin Panel (Tower), verifying system configurations for external clients, including trading pair setup, fee structures, and liquidity provider integrations.
- **Security & Compliance:** Validated KYC tier systems and permission-based access for different administrative roles to ensure platform security for enterprise clients.
- **Liquidity Integration:** Tested the integration of internal services with external exchanges via REST APIs, ensuring stable token liquidity and market-making bot uptime.
- **Backend Validation:** Verified backend database consistency during high-frequency trading events, checking for data gaps in Historical Trade and Rate collections.

**Quality Assurance Engineer & Operations Support**  
**Yellow Software (Yellow.com)** · Chiang Mai, Thailand

May 2019 — Dec 2022

- Ongoing Operational QA & Trading Support run in parallel to project-based work.
- **Technical Bridge:** Provided dedicated support to the operations team for troubleshooting bot malfunctions and API maintenance alerts, reducing service downtime.

**Receptionist & Back Office**  
**Nine Hotel** · Chiang Mai, Thailand

Aug 2024 — Present · Part-time

- Managed guest bookings and documentation across multiple OTA platforms (Booking.com, Agoda, and others) using a cloud-based property management system.
- Coordinated with guests via email, booking platforms, and OTA applications throughout the full booking lifecycle — from inquiry to check-in.
- Managed price setup and adjustments, promotions, and booking policies to maintain rate consistency across all channels.
- Handled front-desk reception, check-in process, and back-office administration tasks.

**Quality Assurance Engineer**  
**Mycos Technologies** · Chiang Mai, Thailand

Feb 2016 — Apr 2019

- **Retail & POS Testing:** Managed manual testing for Club Prophet Systems, focusing on the reliability of high-volume point-of-sale transactions and golf facility management.
- **Mobile Payments:** Verified the CPS Air iOS app with a focus on Apple Pay, Google Pay, and EMV chip card integrations.
